

Round Top Temporary Fence Panels

Round Top Temporary Fence Panels provide a secure, practical solution for Temporary Fencing on construction sites, infrastructure projects, and public events. The rounded top design strengthens the frame and removes sharp edges, improving handling and on-site safety.

These metal fence panels are an alternative to the Square Top Temporary Fence Panel and are designed to provide a robust barrier that effectively prevents unauthorised access, significantly enhancing site safety and security. These Round Top Fence Panels ensure that your site remains secure and compliant with regulatory standards, making them an essential component of any site security strategy. If you need reliable Heras Fencing compatible panels, this design supports fast installation and consistent perimeter control.

Benefits of using Altrad Generation Round Top Temporary Fence Panels

When you install these panels, you strengthen both safety and efficiency.

You gain measurable advantages:

- **Smartweld Technology:** Our Temporary Fence Panels utilise cutting edge Smartweld technology, guaranteeing unmatched strength and longevity. Each panel features a robust 360° weld on 38mm tubes, reinforced with fitted corner webs for maximum durability.
- **Incredible Joint Strength:** With Smartweld technology, our fence panels are up to 70% stronger than those with a traditional MIG weld, ensuring excellent resistance to stress and wear.
- **Taut Mesh:** For enhanced rigidity, the mesh is pulled taut prior to welding and each and every wire has been welded to the frame, resulting in 174 individual welds for added durability.
- **100% Traceability:** Each fence panel undergoes rigorous testing with up to 500kg of force and is provided with a unique ID from the factory for complete traceability and 100% product quality guarantee.
- **Compliance:** Our Temporary Fence Panels are fully HSG151 compliant, ensuring that your construction activities align with local laws and European health and safety requirements.
- **Anti-Climb Design:** These fence panels feature a resilient wired mesh infill which designed to deter climbing, protecting your site from vandals and thieves.

Technology Used to Enhance Durability

Round Top Temporary Fence Panels are reinforced with Smartweld technology combined with galvanised steel coating. The welding process bonds horizontal and vertical wires to create a rigid structure.

Durability features include:

- 360° weld around the 388mm tube frame
- Mesh pulled taut before welding for added structural integrity
- Joints that are 70% stronger than traditional MIG welds
 - Corrosion resistant galvanised finish
 - Reinforced corner welds

Common Applications for Temporary Fence Panels

Round Top Temporary Fence Panels are installed across a wide range of environments.

Typical applications include:

- Events and Festivals: Round top fence panels are ideal for defining event spaces, creating queuing areas, or establishing secure zones at events and festivals.
- Construction sites: The temporary fence panels are perfect for safeguarding worksites and protecting workers, equipment, and visitors.
- Roadworks and infrastructure projects: These fence panels are great for clear boundary demarcation and public safety around work areas.
- Emergency and safety response zones: They are ideal for rapid deployment of secure perimeters for temporary access control.

Technical Specifications:

Product	Weight (kg)	Length (mm)	Height (mm)
Round Top Temporary Fence Panel	13.8	3450	2000
